DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, **the primary winding having conductor with a cross-sectional area greater than a cross-sectional area of the conductor of the additional winding must be shown** or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will

be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 42-45, 47-70, 72-75 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: in combination with other limitations recited in the claims, the primary reason for the allowance is the including, the inventive features of the winding configuration having a primary winding with conductor that has a cross-sectional area greater than a cross-sectional area of the conductor of the additional winding for eliminating the limited efficiency by the saturation level of the wire size that is used for the electric motor construction. In addition to the winding configuration, the capacitor being connected to the additional winding in series, while this connection is connected in parallel with the main winding, wherein the additional winding being wound in reverse direction with respect to the main winding so that the current flows in the main winding and in the additional winding are opposite from one another resulting in the field directions of the main winding and additional winding are opposite also; and, the capacitor functions is to shift the electrical phase across the additional winding; therefore, the current flowing through the main winding having different phase angle from the phase angle of the current flowing to the additional winding.

Comparing to the prior-art of the record, none of the prior art references of the record, either stand-alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
